Subject: rush sequence search

Christina,

I need a rush search for 09/609,543. It is an amended case, and I apparently missed ordering the search.

Please search SEQ ID NO:2, including hits down to 85% identity and fragments thereof (i.e. please extend the search to provide more hits - say double) in the patent and commercial databases (including pending).

thanks,

Christine Saoud

CRFE

Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets of results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, .rapm and .rapn

The Pending database search results should not be left in the case because they contain data that is confidential.
